

CLAIMS

1. A storage container for holding items of recorded media; the storage container comprising:

a cover having a front cover member, a rear cover member, and a spine disposed between the front and rear cover members;

a page adapted to hold at least one item of recorded media;

the page having at least one edge;

the edge of the page being connected to the spine to connect the page to the cover; and

the front and rear cover members being moveable between open and closed positions.

2. The storage container of claim 1, wherein each page is adapted to hold two items of recorded media

3. The storage container of claim 2, wherein each page includes two page halves connected together.

4. The storage container of claim 3, wherein each page is substantially rigid.

5. The storage container of claim 4, wherein the cover is fabricated from paperboard.

6. The storage container of claim 5, wherein each page is connected to the cover with an adhesive.

7. The storage container of claim 6, wherein the edge of the page connected to the cover is V-shaped in cross section to provide a pocket for the adhesive.

8. The storage container of claim 3, wherein the page halves are connected together with locking fingers.

9. The storage container of claim 8, wherein each locking finger is disposed in a pocket to protect the locking finger.

10. The storage container of claim 3, wherein the page halves are connected together with adhesive.

11. The storage container of claim 3, wherein the page halves are connected together with a weld.

12. The storage container of claim 3, further comprising a literature card disposed between the page halves.

13. The storage container of claim 12, wherein each page half includes a rear surface; the rear surface of each page half including planar portions that abut the literature card.

5

14. The storage container of claim 13, wherein the rear surface of each page half has a surface area; the planar portions defining a majority of the surface area of the page half.

15. The storage container of claim 13, wherein at least one of the page halves is substantially transparent.

16. The storage container of claim 1, further comprising a second page adapted to hold at least one item of recorded media; the second page having at least one edge; the edge of the second page connected to the cover.

17. The storage container of claim 1, wherein the cover defines a hinge between the front cover member and the spine and a hinge between the rear cover member and the spine.

20

18. The storage container of claim 17, wherein each hinge is a living hinge.

19. A storage container for holding items of recorded media; the storage container comprising:

a paperboard cover having a front cover member, a rear cover member, and a spine disposed between the front and rear cover members;

the cover defining a hinge between the front cover member and the spine and a hinge between the rear cover member and the spine;

each hinge being a living hinge;

a page adapted to hold two items of recorded media on opposite sides of the page;

the page having at least one edge;

the edge of the page being connected to the spine with an adhesive to connect the page to the cover;

each page being substantially rigid; and

the front and rear cover members being moveable between open and closed positions.

20. A storage container for holding items of recorded media; the storage container comprising:

a cover having a front cover member, a rear cover member, and a spine disposed between the front and rear cover members;

a page adapted to hold two items of recorded media on opposite sides of the page;

5

each page being substantially rigid and including two halves;

a literature card being disposed between the halves; and

the front and rear cover members being moveable between open and closed positions.
